Planned Treatment Date:

November 2011- April 2012

Expected Duration:

This project will be ongoing throughout the winter and early part of this coming spring.

Location: Pine Valley Ranger District, five air miles southeast of the town of Newcastle.

Legal Description: Township 37 South, Range 15 West: Part of Sections 2, 3, 10, 11, 15, 16, 21.

Project Description:

This is a continuation of an ongoing process of maintaining the previously chained areas on the Pine Valley Ranger District. This project includes 690 acres of previously chained area south of the town of New Castle. The project will be implemented with a masticating head mounted on a skid steer.

The Pine Valley Ranger District of the Dixie National Forest is implementing this project to reduce potential negative effects from future wildland fire to the community of New Castle and also to Forest Service lands. This treatment is intended to break up the continuous blanket of pinion and juniper trees that covers that portion of the District, return the landscape to a more historic condition, and create more favorable habitat for wildlife.
