

## Dry Hollow Pile Prescribed Fire

Bureau of Land Management, Richfield Field Office

**Contact Information:** Matt Madariaga 435-896-1593 [mmadariaga@blm.gov](mailto:mmadariaga@blm.gov) or Jill Ivie 435-896-1573 [jivie@blm.gov](mailto:jivie@blm.gov)

**Planned Date:** December 2013 – February 2014

**Planned Location:** This project is located in Garfield County, in the Dry Hollow drainage which is approximately 4 miles southwest of Antimony.

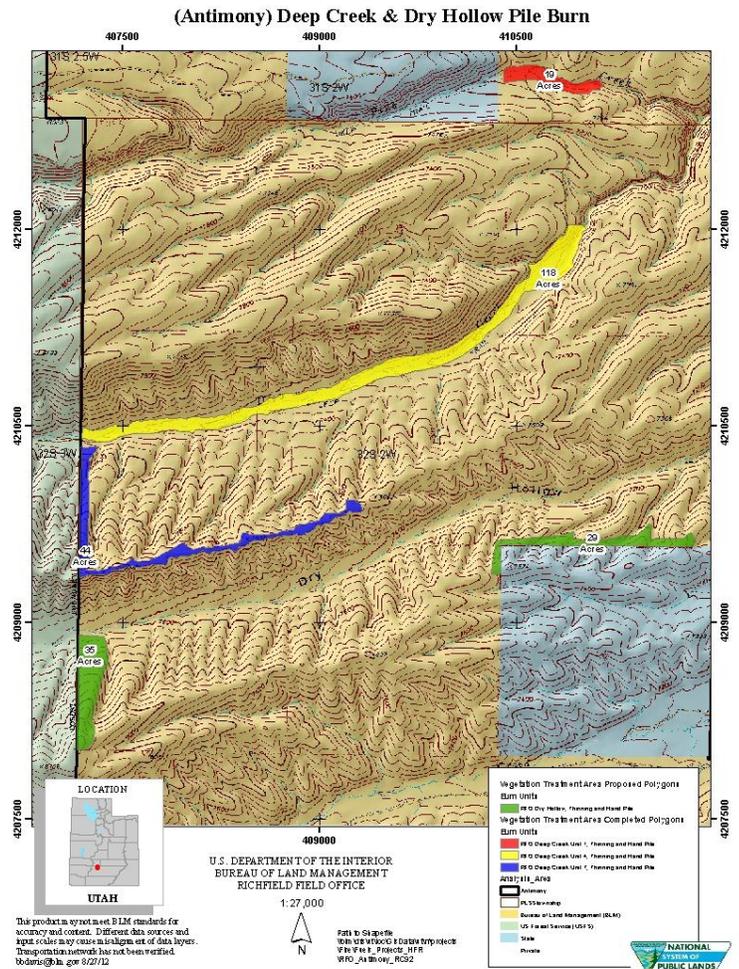

**Legal Description:** Township 32 South, Range 2 West, with multiple sections.

**Lat/Long:** N 38 x 02' x 19.8"; W 112 x 02' x 0.6"

**Project Description:** The Richfield Field Office plans to burn approximately 64 acres within the Dry Hollow area, near Antimony, Utah. The Antimony Piles Burn Plan covers the piles of slash that has resulted from the Deep Creek/Dry Hollow mechanical project. The project was a vegetation management project; to expand watershed conditions, increase community wildfire protection, improve wildlife habitat and help restore rangelands.

The primary objective for this pile burn is to reduce the existing wildland fire hazard, which resulted by removing dense, closed canopy pinyon and juniper trees, thus reducing potential negative effects from future wildland fire, while restoring fire-adaptive ecosystems to federal, state, and nearby private lands.
