**Project Description:** The Reservation Ridge prescribed fire is designed to reduce wildfire hazards and promote aspen regeneration for overall ecosystem health. Slash piles will be burned that were created during the removal of timber and biomass through private contracts with the BLM. Since 2010, the BLM has periodically burned slash as it has accumulated in this project area. The Ashley National Forest and BLM Green River District are conducting similar treatments in the vicinity. Douglas-fir and spruce beetle infestations have caused substantial tree mortality along Reservation Ridge.
