Cherry Springs Dixie Harrow and Seeding Phase II

Vernal, Utah —

The Green River District of the Bureau of Land Management (BLM) would like to inform the public of a fuels project taking place throughout 2010. This project will provide for the Dixie Harrowing and broadcast seeding for the Cherry Springs Dixie Harrow Phase II project. The project involves a double Dixie harrow/ broadcast seeding treatment across 288 acres of mountain big sagebrush. The double Dixie harrow/broadcast seeding treatment involves a double harrow treatment where the second pass of the harrow will be done in the opposite direction of the first harrow treatment. The broadcast seeding would occur during the second harrowing process. Seeding will be done at the rate of 10 lbs/acre. Harrowing will be conducted on the contour as much as possible. Slopes range between 2-10 percent.
