## Book Cliffs Fire in Monitoring Status

A lightning strike on or around September 1, 2010 sparked a wildland fire in the Book Cliffs. The fire is located in T. 16 S., R. 15 E., Section 18, in the Price Field Office.

The fire is actively burning in pinyon-juniper and mixed conifer, and is currently being monitored by air. Due to the light, flashy fuels in the area and the steep and rugged terrain of the Book Cliffs, the BLM will continue to monitor the fire by air. If the fire status changes or begins to pose a threat, suppression tactics may be

reevaluated. Smoke from this fire could occasionally be visible from Highway 191 (Highway 6) between Green River and Price, Utah. Updates will be posted to the Utah Fire Information website at [www.utahfireinfo.gov](http://www.utahfireinfo.gov).
